

John Carl Santos

AI & Full-Stack Engineer | Bulacan, Philippines

johncarsantos30@gmail.com | dyeyc.dev | github.com/JohnCarl-30 | linkedin.com/in/santosjohncarl

EXPERIENCE

AI Engineer | SOFI AI Tech Solutions

Present

- Research technical approaches for client projects and build LLM-backed document and email automation and internal ticketing tooling end to end; project details are under NDA.
- Curate training datasets, define annotation standards, and build evaluation sets for LLM and machine learning systems.
- Expanded automated coverage from 0 to 254 tests gated in CI, including 23 browser tests and assertions for 24 admin-only routes.

Backend Engineer Intern | FlyRank AI

2 months

- Built a RAG pipeline with vector search and LLM APIs for document analysis and question answering.
- Added JWT authentication and role-based authorization; containerized backend services with Docker Compose.

Software Engineering Intern | Alphaexplora

3 months

- Developed RESTful APIs and backend features; debugged and optimized application performance in an agile team.

SELECTED PROJECTS

Relaydesk | AI Support Assistant

2026 - Present

TypeScript, Next.js, LangGraph, OpenAI API, SQLite, Playwright

- Built a LangGraph retrieval loop that answers from help articles, cites sources, and retries weak retrieval with a rewritten query; unresolved questions open a staff ticket with the full transcript.
- Validated follow-up handling with a 43-conversation evaluation and Playwright tests against a production build in CI; corrected the evaluator to score appropriate refusals separately.

directory-pipeline | Company Data Pipeline

2026

Python, Temporal, OpenSearch, FastAPI, Anthropic API, Docker, pytest

- Built crawling, extraction, enrichment, entity resolution, and search workflows with Temporal and OpenSearch, with batch-level retries so failed work does not restart the full pipeline.
- Measured extraction across 36 fixture pages: selectors and regex recovered 232 of 234 recoverable fields with zero incorrect values, leaving two fields for the model.
- Diagnosed a Docker worker crash missed by 144 tests and image builds; added a CI check that boots the stack and detects worker startup failures.

autocards.app (StudyAI) | AI Study Platform

2024 - Present

Next.js, TypeScript, OpenAI API, Supabase, pgvector, Redis, Celery, Docker

- Built an async RAG pipeline for document ingestion and semantic retrieval; benchmarked embedding latency at p95 ~2.17s and ~50 chunks/sec throughput.
- Delivered end-to-end processing in ~14-71s, with OCR-heavy documents adding up to ~60s extraction time.

TECHNICAL SKILLS

Languages & web: Python, TypeScript, JavaScript, React, Next.js, FastAPI, Node.js, REST APIs

AI & data: RAG, LLM evaluation, LangChain, LangGraph, PyTorch, PostgreSQL, pgvector, Redis

Delivery: Docker, GitHub Actions, AWS, Vercel, DigitalOcean, pytest, Playwright, Git

EDUCATION

BS Computer Science | Philippine Christian University

Expected 2027

Consistent Dean's Lister | GWA: 1.15

SELECTED CERTIFICATIONS

Claude Certified Developer - Foundations | Anthropic | Sep 2026

OCI 2025 Certified Generative AI Professional | Oracle | Oct 2025

Building RAG Apps Using MongoDB | MongoDB | Sep 2025
